Education

K.J. Somaiya College of Engineering

B.Tech in Information Technology (IT) | CGPA: 9.24

Mumbai, Maharashtra

Jul 2023 – Present

Work Experience

K.J. Somaiya College of Engineering

Full Stack Developer Intern

Mumbai, India

Dec 2025 – Apr 2026

- Developed a full-stack e-commerce web platform (Client: **Saturn Imports**) using **React**, **Node.js**, **Express.js**, and **PostgreSQL** to manage product catalogs, cart management, and order processing.
- Engineered RESTful API endpoints and optimized database schemas in **PostgreSQL** to ensure fast query performance and reliable transaction handling.
- Containerized application services using **Docker** and established automated **CI/CD** build pipelines with **GitHub Actions** for consistent multi-environment deployments.

Projects

InvoiceFlow | *React, Node.js, Express.js, MongoDB, Gemini AI, Tesseract OCR, Cloudinary*

[Live Demo](#)

- Built a full-stack **Accounts Payable automation platform** streamlining invoice extraction, validation, duplicate detection, manager approval, and payment tracking.
- Engineered an **OCR-first extraction pipeline** using **Tesseract OCR** with **Gemini Vision AI fallback** for low-confidence documents, minimizing unnecessary AI API usage.
- Developed **rule-based duplicate detection** algorithms matching normalized vendor names, invoice numbers, and totals to prevent double payments.
- Implemented **role-based Finance and Manager workflows** with **JWT authentication**, real-time status transitions, and persistent **audit trail logging**.
- Integrated **Cloudinary** for cloud document storage and optimized **MongoDB Atlas** schemas for high-concurrency billing data.

CampusFix-AI – Smart Complaint Management System | *React, JavaScript, Tailwind CSS, Gemini AI, [Live Demo](#)*
REST APIs

- Co-developed a team hackathon web application to automate campus complaint reporting, real-time issue tracking, and resolution workflows.
- Built an interactive **Admin Dashboard** featuring **real-time heatmap visualizations** and a live activity timeline for issue monitoring.
- Integrated **Google Gemini AI** to automate complaint categorization, intelligent priority tagging, and actionable insight generation.
- Designed a **karma-based reputation system** to reward verified user reports and developed robust **RESTful APIs** for dynamic state updates.

Technical Skills

- Languages:** C++, JavaScript, Java, HTML5, CSS3
- Frameworks & Libraries:** React.js, Node.js, Express.js, Tailwind CSS, Bootstrap
- Databases & Cloud:** PostgreSQL, MongoDB, MySQL, Firebase, Cloudinary
- APIs:** REST APIs
- Tools & Platforms:** Git, GitHub, Docker, GitHub Actions, Vercel, Postman
- Core Computer Science:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Cloud Computing

Achievements

- Secured **3rd Rank** at the **KJSCE GDG Hackathon** for developing **CampusFix-AI**.
- Solved **100+** Data Structures & Algorithms problems on **LeetCode**.
